markilux 5010

The cassette awning - slim, strong and simply stylish

markilux

markilux 5010

The cassette awning - slim, strong and simply stylish

design features

- The slim cassette awning with the elegant lines - from the design studio.
- The cover profile is in the same colour as the cassette; This provides for an homogeneous appearance even when the awning is extended.
- Attractive, rounded end caps complete the overall appearance of this slim cassette awning.
- for long-lasting attractiveness the awning has been powder coated.
- Attractive brackets; Design down to the last detail.

technical highlights

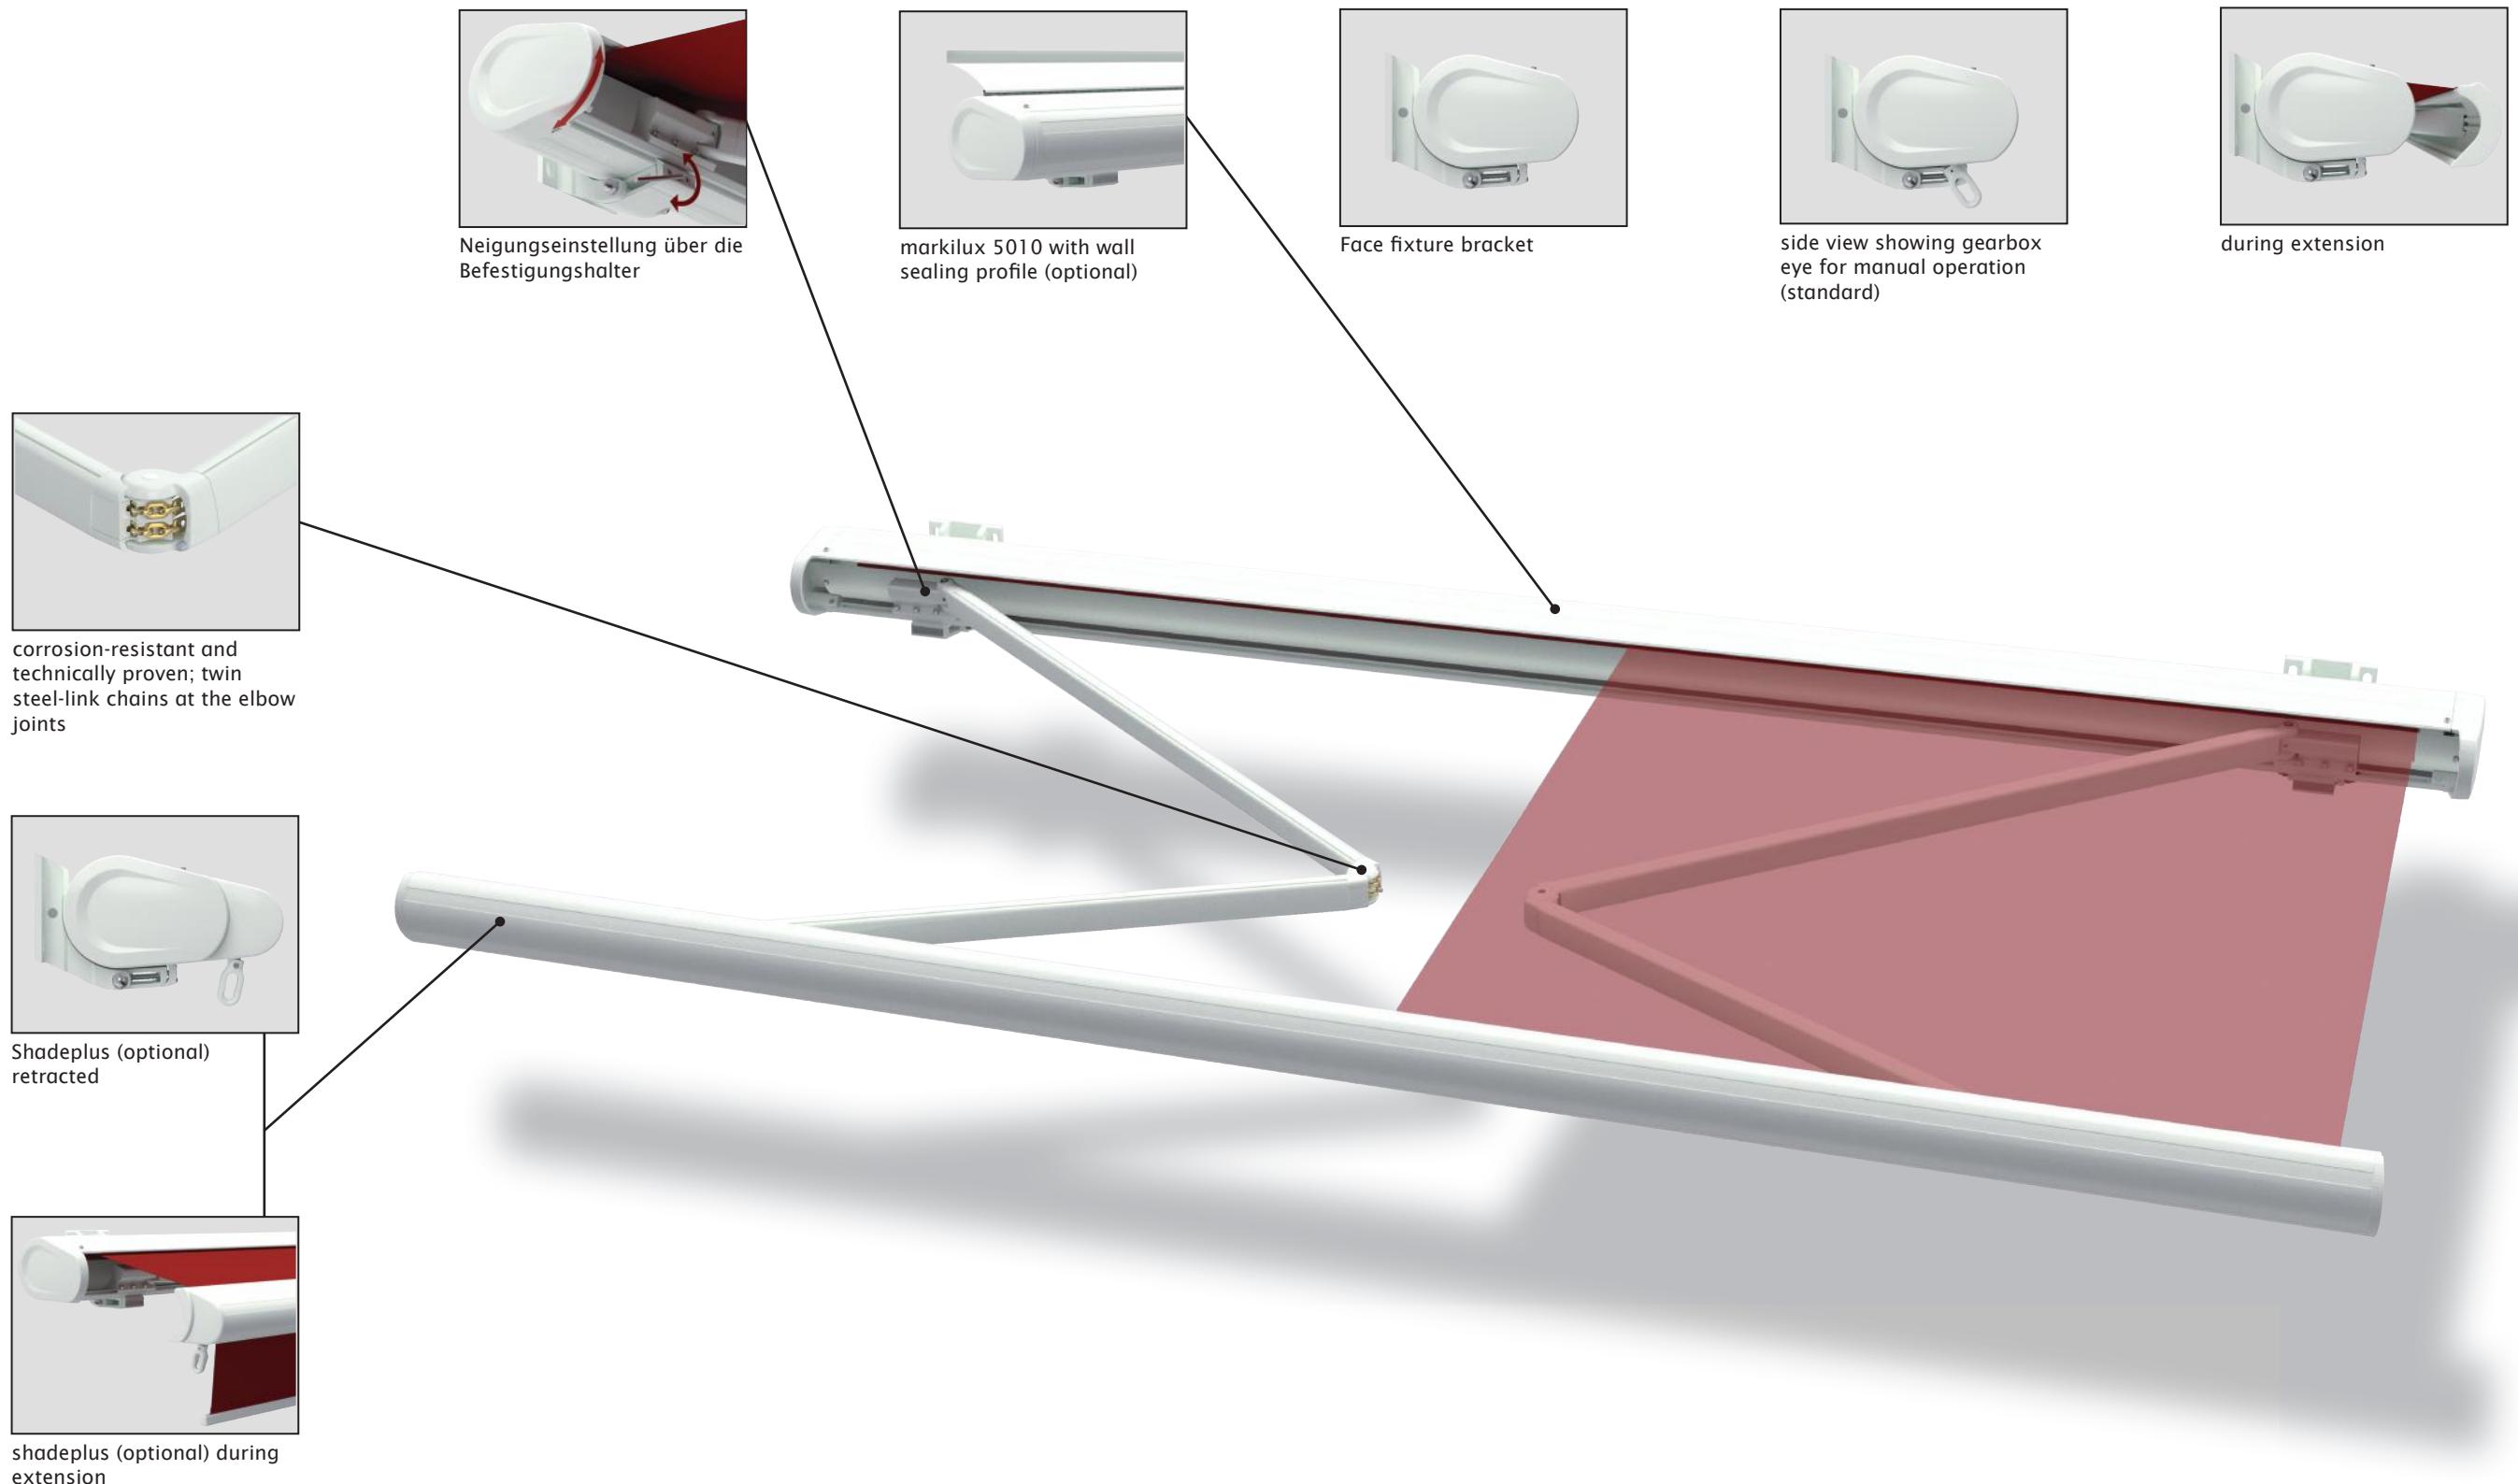

- Because of its superior design the markilux 5010 belongs to the sturdiest and most stable of awnings on the market in spite of its slender shape.
- Front profile with integrated gutter and hidden water drainage spouts.
- When closed the folding arms are protected from the weather by the cassette.
- The extremely sturdy awning construction makes it possible to shade even very large areas safely.
- The 85 mm roller tube ensures the highest rigidity and the best possible cover winding characteristics even at the largest widths.

optional accessories

- In the case of manual operation ease of use is ensured with the spring-assisted gearbox.
- Hard-wired motor drive (optionally with automatic controls) for simple, relaxed operation.
- Radio-controlled motor with handheld transmitter for ease of operation - and ergonomically crafted for ease of use.
- The shadeplus creates an additional room on the patio. Protection from sun, wind and inquisitive glances in one.
- Awning available in non-standard RAL colours

• Awning covers made from acrylic fabric or sunsilk snc with self-cleaning effect • The panel joints of the awning cover are ultrasonically bonded to give a better appearance without bothersome stitching • Manual operation includes a markilux stainless steel winding handle - quality to get to grips with • Folding arms with perfected power transference by means of double, rounded steel-link chains and direct coupling of the springs. The highest safety standards even at large extensions • Folding arms with drop-forged joint components made of aluminium. The pivot bolts sit in Teflon-coated bronze bushes for high stability and longevity • The greater upper to lower arm length ratio ensures high lateral stability in the awning • The use of cam bolts makes fine-tuning of the folding arms a simple procedure • Simply pitch adjustment via the bracket without necessitating readjustment of the front profile • Awnings more than 700 cm wide can be supplied as coupled units. • An easily installed sun and wind sensor provides intelligent control and essential protection • An optional wall sealing profile covers the gap between wall and awning • Available with a valance

dimensions in cm

1) with one Roltex bearing.

17) a shadeplus is not available

19) awnings with 4 m extension are only available with motor (surcharge).

20) no intermediate sizes possible below the standard width of 650 cm.

21) awnings with 3 arms are only available with motor (surcharge).

23) no intermediate sizes possible below the standard width of 700 cm.

24) roltex bearing only from a width of 465 cm.

25) an extension of 400 cm is supplied without interior cover profile.

27) with shadeplus, 3 folding arms.

28) Please note the minimum widths!

54) smallest awning width with 3 arms 700 cm.

55) smallest awning width with 3 arms 641 cm.

Due to the compact awning construction and depending on the width and the arm length, contact between cover and folding arms may occur during extension and retraction. This does not affect the functionality or longevity of the awning.

● = fitted as standard

○ = optional accessory

— = not available

○² = PVC/Soltis 92 covers available up to a max. width of 600 cm and a max. arm length of 250 cm.○³ = wall sealing profile effective up to an awning pitch of 35°

Definition of extension: The extension is measured with the awning extended at a pitch of approx. 15° from the wall over the cover to the leading edge of the front profile. The extension tolerance is - 40mm / + 40mm

In the case of manual operation, assume approx. 16 winding handle revolutions per metre of awning extension.

Extension when using a motor takes approximately 12 seconds per metre.

Definition of shadeplus drop: The shadeplus drop is measured from the bottom edge of the shadeplus profile to the bottom edge of the valance profile. Because of tolerances in fabric thicknesses the drop may be shorter by up to 5 cm.

A shadeplus with gear is available in drops of 150 cm and 190 cm.

A shadeplus is not possible with PVC covers.

A shadeplus with motor is not possible.

Coupled folding-arm awnings are available up to a max. of 3 single units side by side, however only with 6 folding-arms at most and only motorised.

Optionally available with junction roller. Pattern repeat mismatches are possible in the case of junction roller covers.

except when the extension is the maximum for the width of each awning. (see also arm separation table)

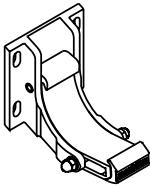

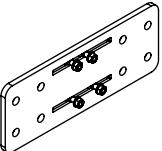

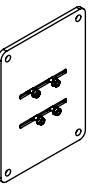

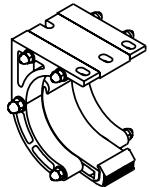

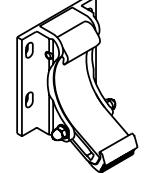

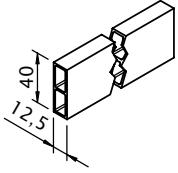

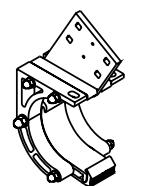

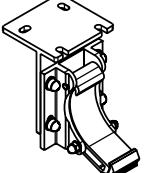

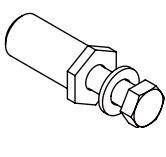

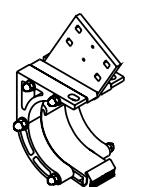

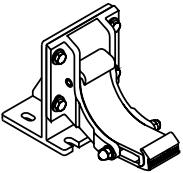

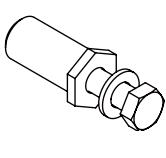

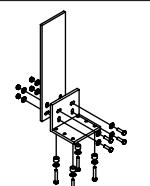

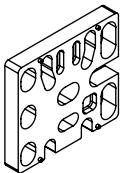

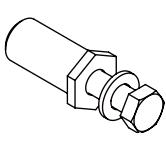

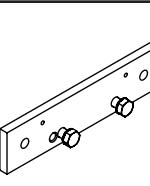

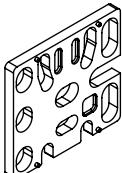

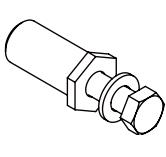

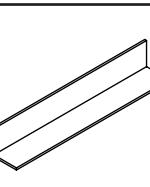

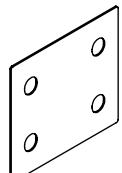

One-piece awning covers only on request.

If coupled awnings are to be fitted into a recess or reveal the overall width of the coupled blind or awning must be at least 6 cm less than the width of the opening to allow the blind/awning to be coupled. Make a special note if the awning is to be fitted into a recess/reveal and note the reveal width separately.

The pull-out force refers to the vertical centre to centre measurement between the fixture points of 90 mm. If this measurement is reduced, the pull-out force increases by 2% in the case of compression-proof substrates and by 19% in the case of non-compression-proof substrates.

M = overall awning width

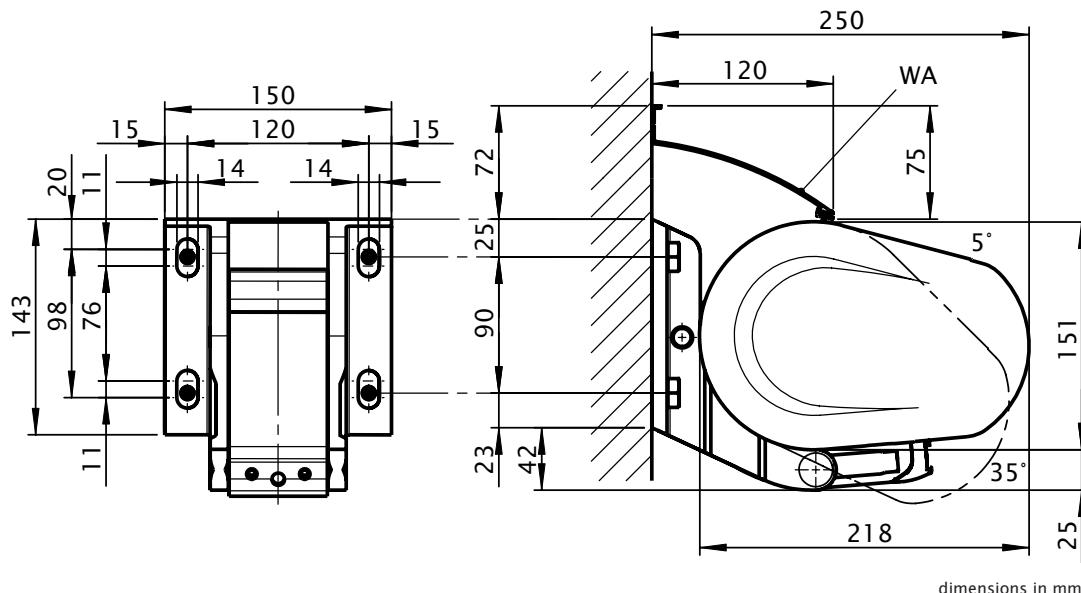

H = extension

FB = pull-out force per fixing point

HT | BHT = bracket quantity | width

BM = no. of fixing points

WA = wall sealing profile

Face fixture with shadeplus and spreader plate A

Pull-out force [N=Newton] per fixture point according to EN 13561, wind resistance class 2

dimensions in cm

▲ = coupled units not available with junction roller

• = no coupled units possible

M = overall awning width
A = arm position
B = arm position
HT = bracket
MB = range for bracket fixture
LR = Rolltex bearing with bracket is always situated under the central seam (depends on the width)
H = extension
SB = standard width
ZB = intermediate width
W = face fixture
DE/DA = top fixture and eaves fixture
HT | BHT = bracket quantity | width

If the brackets cannot be positioned in accordance with this table, make sure the actual measurements are noted on the order form!
